

# Roller/Shoulder Disk Roundtable Workshop

---

Hello all,

Hope your mud is drying out and your sap is flowing.

Vermont Local Roads is pulling together another Roller / Disk, workshop/Roundtable in Bridport on April 24<sup>th</sup>.

There has been quite a bit of interest in the roller setups the Addison County guys have put together or purchased. Last year we had a good turnout but thunderstorms the night before kept some folks from making it. So we've asked them to host another this spring for those and anybody else interested.

A few of the towns will have their shoulder disk rigs there as well. If conditions are right we may try to tear up some shoulder real estate.

We are thinking from 9-12:00, so we'll have coffee in the morning for you then we'll do a walk around and a roundtable discussion with the guys that have the experience with this stuff.

If you plan to attend could you email me at [stu.johnson@vermont.gov](mailto:stu.johnson@vermont.gov) or register by clicking here <https://vermontlocalroads.wufoo.com/forms/register-for-vermont-local-roads-workshops/>.

## **ROLLING / COMPACTION**

- Sets loose aggregate
- Helps eliminate rutting in freshly graded road
- Prevents fines eroding
- At least roll with a truck or the grader
